

## Press Release

Seoul / Munich, June 21, 2025

### **AIGN Label First Education Trust Label to Fayston K-12 School in South Korea**

*Milestone for Responsible AI in Education Reached in East Asia*

The Artificial Intelligence Governance Network (AIGN) has awarded its first-ever Education Trust Label to Fayston Preparatory School, a leading K-12 institution based in South Korea. This recognition marks a significant milestone in the global implementation of ethical and responsible AI practices in the education sector.

The AIGN Education Trust Label is a public certification that signals responsible and future-ready use of AI in schools and universities. Fayston received the label after completing AIGN's structured AI Readiness Check for Education, demonstrating excellence in key areas such as AI transparency, data protection, algorithmic fairness, and digital literacy.

"Education is where trust in AI begins," said Patrick Upmann, Founder of AIGN. "Fayston has shown that responsible AI governance is not just for tech giants or governments – it starts in classrooms, with the next generation."

Fayston implemented dedicated AI literacy modules, ethical use policies, and governance structures for AI-based learning platforms, including transparency tools for students and parents. The school also demonstrated alignment with AIGN's Education Governance Indicators and OECD AI Principles in Education.

"South Korea is setting the pace for AI innovation in education," said Timothy Y. Kang, AIGN Regional Lead for South Korea. "This label is more than recognition – it's a commitment to shaping a generation of AI-literate, ethically aware global citizens."

This first award in South Korea reflects AIGN's growing impact across sectors and continents. With over 1,600 members in 50+ countries, AIGN is building a global network for responsible AI implementation — from enterprises to classrooms.
